

Stabilitas: Managing Corporate Travel During the COVID-19 Pandemic.

PROTECTING AND MONITORING TRAVELERS DURING THE COVID-19 PANDEMIC

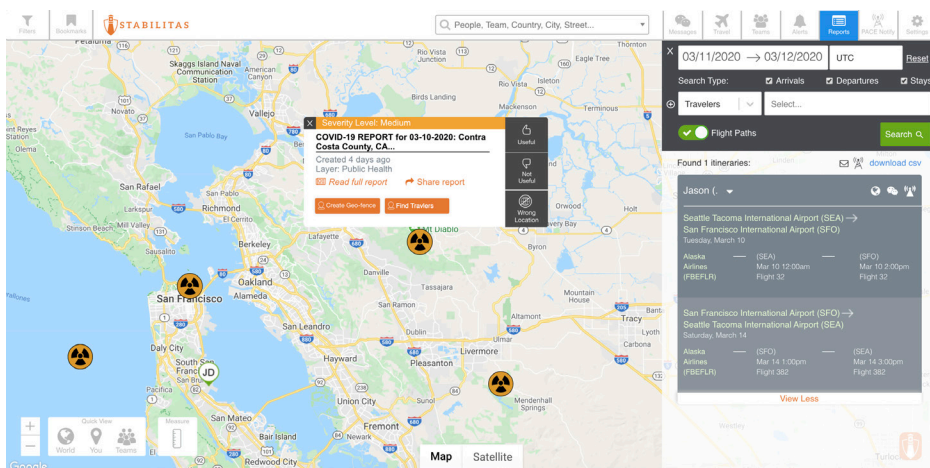

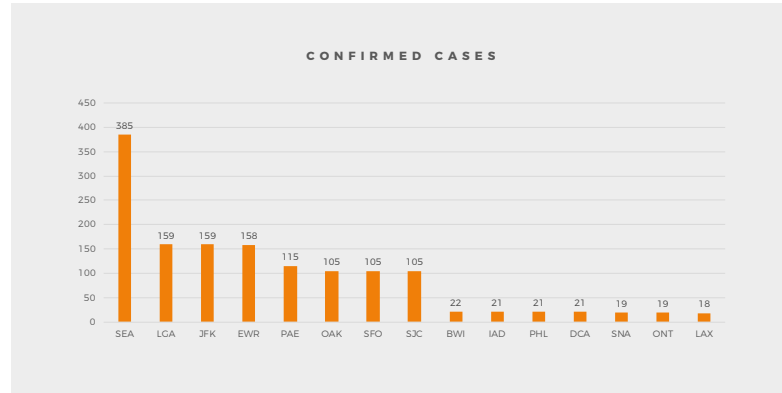

Stabilitas clients rely on our software to ensure the health, safety, and well-being of travelers under their care. With the recent COVID-19 outbreak, it is even more important that these clients stay abreast of the situation and monitor any current or future risk a traveler may be exposed to.

One of the many benefits of the Stabilitas platform is the ability to track how public and private assets are impacted by critical events around the world. Using the recently added [“Intel - Epidemic” layer](#), we identified airports around the United States near the highest incidences of confirmed COVID-19 cases.

TRACKING COVID-19

This analysis shows that Seattle and New York City airports currently pose the highest risk of exposure to the COVID-19 virus (based on testing and reporting to date). Airports in the San Francisco, Philadelphia, Los Angeles, and Washington, D.C. areas also pose moderate risk. In the chart to the right, we've provided a list of high traffic airports that overlap with areas that have seen a significant number of confirmed COVID-19 cases.

Find Travelers

To further help our clients keep on top of this ongoing situation, we've also added a feature that automatically allows you to find all Travelers visiting within 50 miles of a critical event in the next 30 days. From there, clients can take steps to rebook travel or provide additional guidance. To use this new feature for COVID-19 reports, please turn on the "Intel - Epidemics" layer. Click on any report and click the "Find Travelers" button. This will immediately show travelers that meet the specified search criteria. This feature can also be used to distribute emergency notifications to affected travelers.

Stabilitas uses actionable intelligence to save time, money, and lives. Our intent with this new functionality is to help our clients ensure the safety of the people and places they care about. We will continue to monitor the COVID-19 situation and bring new tools to the platform to manage this and similar events in the future.

To find out more about our COVID-19 pandemic feature updates and access publicly available resources, visit us at <http://content.stabilitas.io/en/covid19-resources>.
